Delivering for Royal Oak TWP

System upgrades help ensure safe and reliable delivery of natural gas to your home.

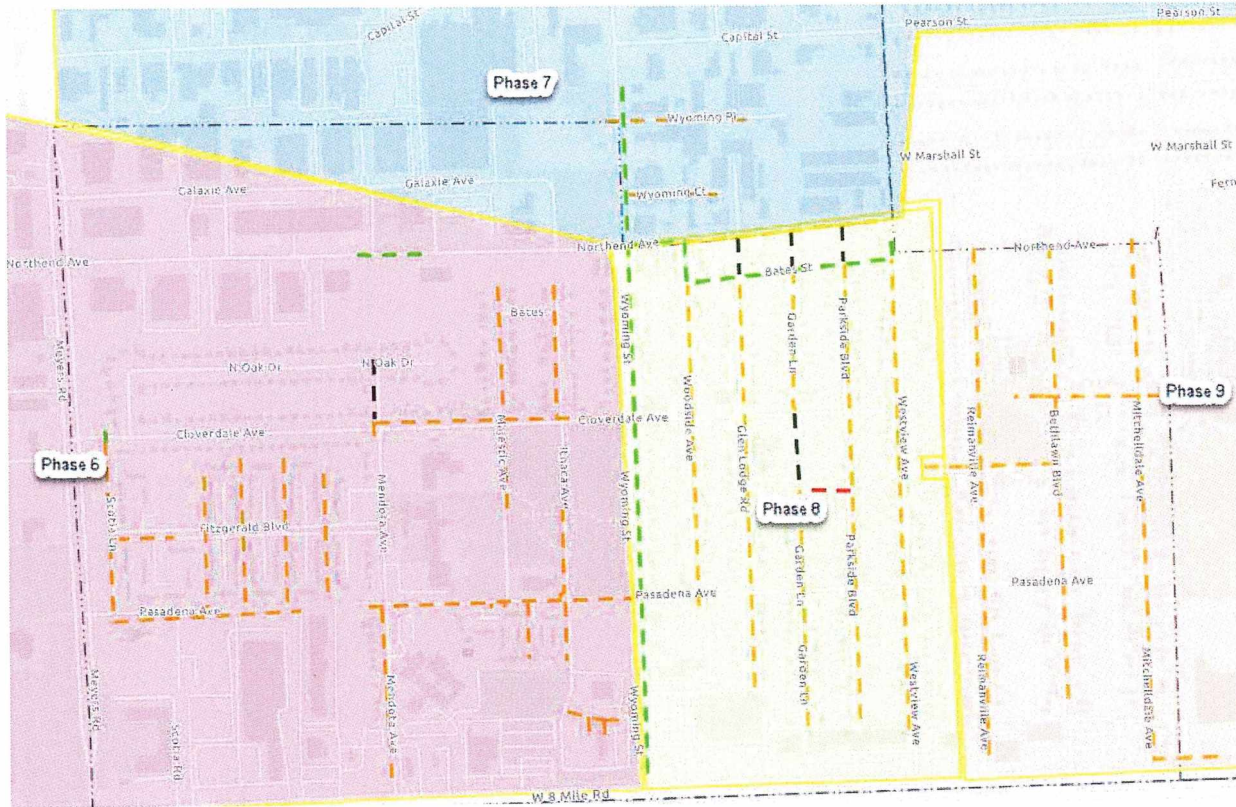

To learn more, visit
ConsumersEnergy.com/pipelineupgrade

We're modernizing Royal Oak's gas system by rebuilding and upgrading key infrastructure. Soon, you'll see crews working on/near your property. The project includes several phases, each with three main parts:

Sewer Locates - First, crews will start by marking underground utilities in your area. They may need access to the inside of your home to locate the sewer lines.

Construction - Then, crews will perform underground work to install new, upgraded pipeline. In some cases, crews may be able to bore underground, minimizing road closures and other disturbances in your area.

Restoration - Finally, when work is complete, all affected roadways, sidewalks and other areas disturbed by construction will be restored fully. Some restoration may be delayed because of weather (freezing conditions, etc.). **For concerns regarding restoration, call 844-660-3477.**

Project Location	Pre-con Date	DAPP #	Phase	Construction Sequence	Construction Start FORECAST	Planned Retirement Date	Status
